Cryptoloc Vault

# The World's Most Secure, Fully Customised EDMS

Cryptoloc Vault gives you a place to store your business files securely, without having to worry about cyber-attacks, theft or loss. It's designed around your needs and integrates with your other software.

Cryptoloc Vault is a high security cloud based EDMS (Electronic Document Management System) designed for enterprise clients, that need to protect their business files and data from cyber-attacks, disaster, theft or loss. It is a fully customised and tailored solution built around your exact requirements. It automatically encrypts your documents using our patented multi-layered encryption technology. It integrates with your other software and active directory. It allows you to fully trace and record every action, whilst leaving a full audit trail and forensic footprint for each file, meaning you know exactly who has accessed or modified a file or folder.

It offers the best protection against ransomware and hacking attacks and is virtually impossible for a hacker to obtain any usable data. Cryptoloc Vault is a fully hosted service meaning there are no hardware purchase costs involved and because it's based in the cloud, you choose which country you want to store your data in.

**Cryptoloc Vault is a highly tailored solution for enterprise clients. Small and medium clients may benefit from using our cloud file hosting service, YDF, which is available on a monthly subscription basis.**

# Encrypt, Store and Manage Your Documents In The Cloud

Cryptoloc Vault offers you full protection against data loss, theft and ransomware. It integrates with your other software, encrypts documents and stores them securely in a place where only you can get to them.

Cybersecurity represents a new risk to every business in the world. Recent attacks on high profile companies have echoed the importance of attack readiness, across the world, with many large enterprises falling victim to ransomware attacks. Ransomware attacks are where hackers successfully gain entry into a network, encrypt the files within that network and then hold the company to ransom. In 2020, currency exchange firm Travelex suffered a ransomware attack which contributed significantly to the collapse of the company a short time later, according to the company's administrators.

Many businesses suffer from costly fines in addition to damage to their business and reputation as a result of a cyber-attack. Cryptoloc Vault protects your enterprise from attack by encrypting your files at source. It then stores your files in a secure location and records every single movement, modification or update to a file. Even if hackers were to gain access to your network it would be impossible for them to steal your files, obtain any usable data or encrypt your files. Cryptoloc Vault offers the best in class for both security and usability. It is fully customised and designed to be integrated with your other software packages.

# A Safe Place Designed To Work Exactly How You Need It To

Cryptoloc Vault is designed to meet your exact requirements. You decide how you want it to work, you decide how you want it to interact with your business and you decided how you want it to look.

Cryptoloc Vault is your vault, which means you have full control over everything right from the design phase, through to implementation and ongoing support. Vault can be integrated with your other software packages and even your active directory, meaning you can synchronise employee access rights with your system settings. If you prefer a self-sufficient solution Vault can operate through a custom web portal that looks and behaves how you want it to, with your logo, branding and custom layout.

You can even add custom functionality such as custom search forms and parameters, meta data, database functionality and more. Cryptoloc Vault is powered by AWS, meaning you can choose where you want your data stored, putting you in full control of which data and privacy laws you want to follow. Right from the start our team of solutions architects will listen to your exact requirements and design a custom solution around you. We'll even support you during and after the implementation period.
